

CORRIDA

POWER STRIPPER

EMULSIFIES THE LARGEST BUILDS OF FLOOR FINISH

VERY EASY TO RINSE

DOES NOT RELEASE ANY STRONG FUMES

NONYPHENOL-FREE / PHOSPHATES-FREE

CORRIDA is a highly powerful stripper, designed to break down and emulsify the heaviest accumulations of floor finish layers. CORRIDA meets the new requirements created by the latest floor maintenance methods. More specifically, when the surface has undergone a long period of high-speed polishing, "burnishing", and layers have been added regularly, CORRIDA succeeds in penetrating this accumulation to the bottom to completely remove it from the floor.

CORRIDA works best in cold water. Indeed, its composition based on water-soluble solvents makes it a more effective product at low temperatures, thus avoiding the evaporation of certain important active ingredients. This also makes it an economical product and saves energy.

CORRIDA can be diluted in a proportion of 1 part stripper in 2 parts water up to 1 in 6. The stripper must be spread generously on the floor. Even when applied with plenty of water, CORRIDA remains uniform and does not form puddles. This allows the product to work equally on the entire surface and avoid inconsistent stripping, where competing products often show weakness.

Although super powerful, CORRIDA is safe for different types of surfaces. CORRIDA does not release a strong or unpleasant odor. This therefore makes the work of janitors and users more pleasant, particularly when the surface to be stripped is very large or in places with little tolerance for strong odors.

1. It is advisable to mop the floor to remove excess dust and various residues. Choose the required dilution according to the accumulation.
2. Apply the solution to the floor and let it penetrate for about 4 minutes. Keep the floor well wet.
3. Scrub with a suitable pad, or, as the case may be, mop again, agitating lightly.
4. Pick up old finish and dirt, rinse thoroughly with clean water. It is highly recommended to neutralize the floor using PARALL NACID Neutralizer to control alkalinity on the floor.

TECHNICAL DATA

APPEARANCE: Fluorescent Yellow
ODOR: Lemon
SOLUBILITY: Complete
PH: 12.5
